

PASCAL MUSABYIMANA

AI ENGINEERING · AGENTS & AUTOMATION · COMPUTER VISION

Ghent, Belgium | +32 456 18 01 34 | pascal-musa@hotmail.com | pascal-maker.github.io | linkedin.com/in/pascalmusabyimana-573b66178 | github.com/pascal-maker

PROFILE

AI-focused student and hands-on builder with experience developing LLM agents, workflow automation, matching systems, computer vision applications and internal tools for companies. Comfortable moving from problem discovery to working prototype, integrating APIs and business data, and iterating with end users. Particularly interested in early-stage products, venture building and applied AI in startup environments.

EXPERIENCE

AI Engineer

2026 – Present

Het Veer

- Internal AI Automation — Built internal AI automation workflows to streamline repetitive business processes.
- KPI Dashboard & Balanced Scorecard — Built a KPI dashboard / Balanced Scorecard board to track strategic goals and performance indicators.

AI Solutions Engineer (Student / Part-time)

2025 – Mar 2026

Sweetspot Experts · Deerlijk

- Built AI agents to automate internal consulting workflows and reduce repetitive manual work.
- Developed an automated Discovery Report pipeline using Claude, Notion MCP and structured prompting, with built-in review steps.
- Integrated LLM workflows with RDF/SPARQL knowledge graphs and automated client-ready PowerPoint generation from structured content.
- Rapidly prototyped internal AI tools, several of which became part of the company's daily workflow.

Computer Vision Software Engineer (Contract)

Jun 2025

EasyPost Belgium · Zwijnaarde

- Developed a YOLOv8-based computer-vision proof of concept for real-time anomaly detection on a logistics production line.
- Designed the image-processing and inference pipeline under production constraints; delivered the solution under NDA.

Founder

2021 – 2023

Lovia App · Ghent

- Designed and built a student-focused social networking app from concept to beta, covering product strategy, user flows, testing and GDPR considerations.
- Gained hands-on experience with the full early-stage product lifecycle and the trade-offs involved in shipping and iterating quickly.

IT Consultant (Student Job)

2021 – 2024

Beego · Belgium

- Provided hands-on IT support to people experiencing digital exclusion and maintained a 4.5/5 customer satisfaction rating.

SELECTED PROJECTS

Luminus AI Energy Assistant | Multi-agent application

- Designed and shipped an AI-powered energy assistant for billing questions, service booking and personalised energy-saving guidance.
- Built with Eve, OpenAI, TypeScript and custom tools; deployed on Vercel. Live demo: energyagent-ten.vercel.app

AI-Powered Finger Counting Learning System | Howest · 2026

- Built a real-time educational computer-vision application using a custom dataset and gesture-classification model.
- Integrated Raspberry Pi hardware, camera, OLED, rotary encoder, buttons and buzzer; packaged with Python, Gradio and Docker.
- Designed and laser-cut a custom enclosure, delivering a complete end-to-end prototype.
- Technologies: Python, MediaPipe, Scikit-learn, Raspberry Pi, Docker, Gradio, Git, Linux

Computer Vision Sports Analytics | Personal project · 2024

- Built an indoor-football detection and tracking pipeline; collected/annotated a custom dataset and trained a YOLOv8 model.
- Used Python, OpenCV, Roboflow and ClearML for inference and experiment management.
- Technologies: Python, YOLOv8, Ultralytics, Roboflow, ClearML, OpenCV

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, C#, Swift

AI / ML: LLM agents, multi-agent systems, computer vision, YOLOv8, SAM-2, multimodal AI, image segmentation

Frameworks: FastAPI, Next.js, React, Streamlit, Gradio, PydanticAI, Agno, Chainlit, Mastra

Data / Integration: REST APIs, MCP, A2A, RDF/SPARQL, knowledge graphs, PostgreSQL/pgvector, Redis, MySQL

Tools: Git, GitHub, Docker, GCP, Firebase, Hugging Face, Label Studio, Claude Code

EDUCATION

- Ghent University — BSc Public Administration
- Howest — Creative Technology & AI

COMMUNITY & INTERESTS

Volunteer Organizer, Off the Radar (Brussels, 2026) — helped organize an invitation-only gathering for AI builders, CTOs and engineers.

Interests: AI & machine learning, startups & venture building, computer vision, data science, macroeconomics, calisthenics.
