PROFILE

AI builder who turns business problems into working prototypes, from LLM agents and workflow automation to computer vision.

EXPERIENCE

AI Specialist
Sep 2026 – Oct 2026

Het Veer · Landegem

I worked as an AI Specialist at Het Veer, using AI to improve how the organization runs day to day. My work covered ERP systems, dashboards, surveys, KPI reporting, process automation and data analysis. I also helped colleagues start using AI tools in their daily work and updated the company website (trissfacility.klant.kastro.be) using WordPress and Codex.

Volunteer
Jun 2026

Off the Radar · Brussels

I helped organize Off the Radar from start to finish. It's an invitation-only gathering for AI builders, CTOs and engineers. It began as a WhatsApp group with a few tech enthusiasts and grew into one of the largest invite-only AI events in Belgium.

AI Solution Engineer
Nov 2025 – Mar 2026

Sweetspot Experts · Deerlijk

I built AI solutions and internal tools to automate consulting workflows. I also experimented with wide versus narrow ontologies and advanced semantic chunking. These sound academic, but they made a real difference in how well the tools performed.

AI Intern
Jun 2025

EasyPost Belgium · Ghent

I developed a camera-based system that automatically spots irregularities on a logistics production line, so problems are caught early instead of by hand. I built and tested it in a short time, working through several rounds of improvements until it ran reliably. The system is still in use today, regularly collecting new images and flagging anything unusual.

Founder
Sep 2021 – Jun 2024

Lovia App · Ghent

I built Lovia, a dating and social discovery app for university students. The idea came partly from *The Social Network*, one of my favorite movies and one of the reasons I started building products. What began as “could I actually build this?” became a real Android and iOS app. It had location-based swipe matching, real-time photo sharing and access limited to verified students. The app is no longer maintained, but the APK is still on APKPure, which is a funny but satisfying reminder that it was real.

- **Product and MVP:** Scoped the first version, set the roadmap and tested product-market fit through regular releases.
- **Design:** Designed the user flows, app screens, visual assets and marketing website.
- **Trust and privacy:** Set up student email verification and GDPR-conscious privacy flows so the community stayed safe and verified.
- **Beta testing:** Ran closed beta groups, gathered feedback and shipped regular updates to improve the app and keep users coming back.

SELECTED PROJECTS

EnergyAgent Karen | *Voice & chat assistant*

- A Dutch voice and chat assistant for Belgian household energy questions (Luminus, Eneco, Elegant and others). Karen answers from an energy FAQ, official supplier and regulator pages, and PDFs that visitors upload.
- Compares regional energy offers through the official comparison tools (V-test, BruSim, CompaCWaPE) and uses a daily-updated market data pipeline for price and contract answers.
- Built my own agent harness in Python (FastAPI, Gradio, Gemma) with a Framer/React chat front end; the backend runs on Hugging Face Spaces. Live demo: ask-karen.framer.website

AI-Powered Finger Counting Learning System | *Howest · 2026*

- Built a real-time educational computer-vision application using a custom dataset and gesture-classification model.
- Integrated Raspberry Pi hardware, camera, OLED, rotary encoder, buttons and buzzer; packaged with Python, Gradio and Docker.
- Designed and laser-cut a custom enclosure, delivering a complete end-to-end prototype.
- Technologies: Python, MediaPipe, Scikit-learn, Raspberry Pi, Docker, Gradio, Git, Linux

Computer Vision Sports Analytics | *Personal project · 2024*

- Built an indoor-football detection and tracking pipeline; collected and annotated a custom dataset and trained a YOLOv8 model.
- Used Python, OpenCV, Roboflow and ClearML for inference and experiment management.
- Technologies: Python, YOLOv8, Ultralytics, Roboflow, ClearML, OpenCV

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, C#, Swift

AI / ML: LLM agents, multi-agent systems, computer vision, YOLOv8, SAM-2, multimodal AI, image segmentation

Frameworks: FastAPI, Next.js, React, Streamlit, Gradio, PydanticAI, Agno, Chainlit, Mastra

Data / Integration: REST APIs, MCP, A2A, RDF/SPARQL, knowledge graphs, PostgreSQL/pgvector, Redis, MySQL

Tools: Git, GitHub, Docker, GCP, Firebase, Hugging Face, Label Studio, Claude Code, Codex, Framer

EDUCATION

- Ghent University — BSc Public Administration
- Howest — Creative Technology & AI

INTERESTS

AI & machine learning, startups & venture building, computer vision, data science, macroeconomics, calisthenics.
